DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 9 and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Edwards et al. (4,811,561). Edwards et al. discloses a regulating apparatus with valve controlling a consumer 30, a job computer 42, a bus 44 connected to the job computer 42 and each valve 30c, an analog sensor 78 producing a signal for controlling or regulating the consumer 30, and an autonomous controlling and regulating element arranged between the bus 44 and each valve 30c, wherein each element has a bus interface 72 connected to the bus 44, a microcontroller 70 connected to the bus interface 72 and to the valve 30c, and an analog-to-digital converter 80 which is connected to the microcontroller 70 and which can be connected to the one analog sensor 78, and the controlling and regulating unit is structurally combined with the valve as a servo assembly 30A.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

Art Unit: 3745

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 11-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Edwards et al., as applied to claim 10 above. Edwards discloses all of the claimed subject matter except for plug in connection configurations between the sensor, the bus, microcontroller, and a power supply.

Official notice is taken that plug in connections between sensors, buses, microcontrollers, and power supplies are well known and their configurations are easily determined to meet design requirements. It would have been obvious at the time the invention was made to a person having ordinary skill in the art to modify the plug in connecting configuration between the sensor, the bus, and a power supply of Edwards et al. to be as claimed as a matter of engineering expedience as evidenced by Lederer et al. (WO 01/77534) cited in PCT/IB03/03780.

Prior Art

Prior art made of record but not relied upon is considered pertinent to Applicant's disclosure and consists of three patents.

Kockemann, Laborde et al., and Page et al. are cited to show computer controlled regulating systems.
